JEAN KETCHAM LOMINSKA COLLECTION OF GEORGE HUNTINGTON FAMILY PAPERS, 1850-1985 (bulk 1858-1916)

.5 cubic feet (2 boxes, 1 flat box, 1 framed item)

M-0101

BIOGRAPHICAL NOTE: George Huntington, the physician for whom Huntington's Chorea or Huntington's Disease is named, was born April 9, 1850 in East Hampton, N.Y., the son of George Lee Huntington (1811-1881) and Mary Hoogland Huntington. Both Huntington's father and his grandfather, Abel (1778-1858), were physicians in East Hampton.

Huntington attended the Clinton Academy in his native town and was enrolled at the College of Physicians and Surgeons (P&S) of Columbia College, 1868-1871. He finished his medical studies at P&S in February 1871 with an inaugural thesis on opium. Because he was not yet 21 at the time, Huntington's diploma was not actually awarded until June 1872, though he was listed in the College records as a member of the Class of 1871. Shortly thereafter he settled in Pomeroy, Ohio, where he began practicing medicine.

While in Ohio, Huntington presented a paper entitled "On Chorea" to the Meigs and Mason Academy of Medicine in Middleport on February 15, 1872. In it, Huntington discussed the more common form of chorea, often found in children. He then went on to describe the "form of the disease which exists, so far as I know, almost exclusively on the east end of Long Island...The hereditary chorea, as I shall call it, is confined to certain and fortunately a few families, and has been transmitted to them, an heirloom from generations away back in the dim past." Based on his study of the casebooks of his father and grandfather and on his own observations, Huntington deduced the distinguishing characteristics of this rarer form of chorea: "1. Its hereditary nature. 2. A tendency to insanity and suicide. 3. Its manifesting itself as a grave disease only in adult life." Huntington pointed out that if the disease skipped a generation then it would never again manifest itself in the descendants of the original sufferer: "Unstable and whimsical as the disease may be in other respects, in this it is firm, it never skips a generation to again manifest itself in another; once having yielded its claims, it never regains them."

Published in the April 15, 1872 issue of Philadelphia's *Medical and Surgical Reporter*, Huntington's report was so lucid, accurate and poetic that the disease has come to bear his name. His insight into the rules of heredity predates by a generation the rediscovery of Mendel's laws of genetic transmission.

Huntington married Mary Heckard of Pomeroy in Oct. 1874. They had six children, five of whom survived into adulthood. The couple returned to New York soon after and settled in LaGrangeville, Dutchess County. Huntington practiced in this rural community until 1901 when ill health led him move to Asheville, N.C. When his health recovered in 1903, he returned to Dutchess County, settling in Hopewell Junction, where he practiced until 1914 when poor health forced him to retire.

Huntington was elected president of the Dutchess County Medical Society in 1887 and served as a New York State Commissioner in Lunacy for Dutchess County. He was an honorary member of the Brooklyn Neurological Society.

George Huntington died on March 3, 1916 of pneumonia at the home of his son, Dr. Edwin H. Huntington, in Cairo, N.Y.

SCOPE AND CONTENT: The Lominska Collection of George Huntington family papers contains material relating to George Huntington (1850-1916); his parents, George L. and Mary Hoogland Huntington; his aunt Cornelia; his siblings; and his children: Katharine, Charles G., Abel, Elizabeth, Edwin H., and Eleanor.

Included are such biographical materials as Huntington's marriage certificate; obituaries, memorial statements, and family reminiscences of George Huntington; and manuscripts, including a few letters from George Huntington's parents and aunt.

The bulk of the collection is comprised of drawings and photographs. George Huntington was a talented amateur artist and caricaturist and the collection has approximately 17 of his often humorous drawings as well as a sketch book. In addition, there are 7 illustrations and a booklet of drawings by his son Abel, who died at age 11 in 1891.

There are only a few photographs of George Huntington, though one is the much-reproduced image of him circa 1872 when he delivered the paper that brought him fame. The collection also includes photos of his sister, Mame Huntington Bridge, his brothers, Abel and Benjamin; his wife, Mary Heckard and her sister, Lucy; and all of his children. There are several group portraits of the Huntington family which include George Huntington, most taken near the end of his life, and a few images of the Huntington homes in LaGrangeville and Hopewell Junction, N.Y., probably taken in the 1930s or 1940s.

ORGANIZATION: Organized in five series: I. Biographical and Genealogical; II. Manuscripts; III. Drawings; IV. Photographs; V. Oversize

LANGUAGE: English.

ACCESS: Unrestricted.

PROVENANCE: Gift of the Lominska family, descendents of George Huntington through his daughter, Eleanor Ketcham, 2010 (acc.#2010.06.21). The collection is named for Eleanor's daughter, Jean Ketcham Lominska, who preserved and organized these papers.

RELATED COLLECTIONS: Archives & Special Collections' George Huntington Papers (acc.#2011.008) has additional papers of George Huntington and his family.
